Bringing Clean Room Technology To Everyday Spaces

Cannabis Growers: Better air quality will increase yield, protect against mold, and remove odor

Successful cannabis cultivation is a highly scientific process that requires attention to light and nutrients. Clean air is an equally important contributor to high plant yield and quality. Better air quality can also help protect against mold, improve safety, and remove odor. Cannabis growers should invest in better indoor air quality now – the short and long-term gains from improved IAQ will provide a significant return on your investment.

SecureAire will Increase Plant Yield

A plant's root system requires oxygen for aerobic respiration, an essential process that is critical for a healthy plant. Ensuring clean, pure air in your grow room provides maximum growth potential.

SecureAire Technology has been directly linked to an estimated 20% increase in product yield by a leading grow facility in the state of Florida.

SecureAire will Protect Against Mold

Mold and other bacteria can be a significant problem inside your grow room. SecureAire's technology is proven to remove up to 99.9% of bacteria and volatile organic compounds (VOCs). It's worth the investment now to prevent a mold problem, as some retailers have been forced to recall batches of cannabis. This can create a serious liability for your company because mold and bacteria can cause chest pain, inflammation of the lungs, and in rare cases, hospitalization and death among customers who smoke or vape your products.

evaluations and
SecureAire demon-
strations to cannabis
growers across the country.**

SecureAire will Remove Odor

SecureAire can remove the volatile organic compounds (VOCs) that cause a severe smell. For example, a medical cannabis business in Colorado named Cannacraft faced a lawsuit for causing "noxious odors," which were allegedly harming property values near its grow site. In response, the company installed SecureAire to address the problem, and later a jury decided that the business was not responsible for the damages contained in the lawsuit.

Cannabis Growers:

Choose the right SecureAire product for your business

SecureAire's products are equipped with ACTIVE Particle Control™ Technology

At the heart of every SecureAire System is our proprietary ACTIVE Particle Control™ Technology – a revolutionary breakthrough in air purification. With this system, every aspect of indoor air pollution is addressed: airborne particulates, dangerous pathogens, and toxic VOCs (volatile organic compounds).

We offer a variety of products to suit the needs of cannabis operations of all sizes.

ACS Slim Line Air Purification System

The ACS Slim Line Air Purification System consists of the ACTIVE Particle Control™ System and a replaceable SecureAire filter cartridge. The Slim Line can be adapted to existing rooftop HVAC units and does not inhibit airflow through the system with excessive pressure drop characteristics. The system can handle up to 600 feet per minute air velocities.

ACS Modular Purification System

The ACS Modular Air Purification System consists of the ACTIVE Particle Control™ Technology System, a replaceable SecureAire filter cartridge, which is augmented by the building's fan systems. This complete system can deliver up to a continuous 8,000 cubic feet per minute of particle-free air.

EOS Portable Air Purification System

The EOS Portable Air Purification System consists of the ACTIVE Particle Control™ Technology System, a replaceable SecureAire filter cartridge, a quiet and powerful fan, and a variable-speed controller. This complete system can deliver up to 600 cubic feet per minute of particle-free air, enough to purify a room as large as 1000 square feet.

APS-1000XL Portable Air Purification System

The APS-1000XL Portable Air Purification System consists of the ACTIVE Particle Control™ Technology System, a replaceable SecureAire filter cartridge, a quiet and powerful fan, and a variable-speed controller. This complete system can deliver up to 1000 cubic feet per minute of particle-free air, enough to purify a room as large as 1500 square feet.

SecureAire has a successful record of partnering with multiple professional cannabis growers to improve plant quality, prevent mold and remove odor.
